Skills :-

WEB APPLICATION DEVELOPMENT

HTML, CSS, JAVASCRIPT, BOOTSTRAP,ANGULAR.

DBMS

My SQL, MONGODB, DJANGO.

Back End

Python, Javascript.

Certifications :-

Web Development Course: - (Internshala)

Python Full-Stack Developer: - Pixel Wind Institute, Visakhapatnam

Data science:- At IBM Data Science Course.(Nov 5 2025 to JAN 18 2026).

Work Experience:- Symbiosys Technologies -1 year. in Computer Networking and Hardware. (Destop Support)

Languages Known:-
English, Hindi, Telugu

Profile Summary :-

Hard-working and committed to learning. Self-directed and energetic with superior performance in both autonomous and collaborative environments. Motivated and proactive in working independently as well as collaborating with other's on group project's. Keen to drive phenomenal project completion in timeframes while reducing costs and exceeding customer expectations.

Key Skills :-

1. MIS Development: Design and development of Management Information Systems.

2. Data Analysis: Data analysis, reporting, and visualization.

3. Business Intelligence: Business intelligence tools and techniques.

4. Database Management: Database design, development, and management.

5. Problem-Solving: Strong problem-solving skills with ability to identify areas for improvement.

Education :-

1. Bachelor's/Master's Degree in Computer Science/Information Technology, **Raghu Engineering College (Autonomous).**
Visakhapatnam, Andhra Pradesh, India. 6.86

1. Database Management Systems: SQL Server, MySQL.

2. Programming Languages: Python, SQL, JAVA Script

Additional Skills :-

Voice control Autonomous using IOT

Module Description:

1. Speech Recognition Module: The speech recognition module is responsible for converting spoken commands into text format for further processing. Utilizes advanced algorithms, such as deep learning models, to accurately transcribe speech inputs. Accounts for factors such as ambient noise, accents, and speech patterns to enhance accuracy and robustness.

2. Natural Langcuage Processing (NLP) Module: The NLP module interprets the text input and extracts actionable commands and intents from natural language queries. Employs NLP techniques such as named entity recognition (NER) and semantic parsing to understand user commands. Considers context and user preferences to generate structured commands understandable by the vehicle's control system.

3. Command Execution Module: The command execution module translates interpreted commands into specific vehicle control actions, such as steering, acceleration, braking, and navigation. Interfaces with the vehicle's autonomous driving system to execute the desired actions based on user commands. Ensures seamless integration between voice control inputs and vehicle operation for smooth and intuitive user experience.

4. loT Connectivity Module: The loT connectivity module facilitates communication and data exchange between the vehicle and loT-enabled infrastructure.
